Competence in Plant Engineering
Rapidly changing market conditions, stricter environmental laws and dwindling resources force plant owners increasingly to look for new ways to keep their products competitive and come with new, high-quality products respectively.

We as EDL face these challenges and as medium-sized plant engineering company provide innovative and custom-tailored technological solutions – from feasibility studies through to turnkey plants.

Based on a long history and after the refoundation about 25 years ago as a subsidiary of the traditional Edeleanu we have established an excellent reputation in the refinery and chemical sectors by professional competence and reliability as well as creativity and flexibility. This is not only true to the domestic German market but also to an international environment.

We serve the industry with our process know-how and many years of experience both as technology provider and conventional plant engineering company in all phases of the project business.

Since 2003 EDL has been an integral part of the Austrian Pörner Group based in Vienna. The Pörner Group is an international engineering network with over 500 engineers at eight locations.

As a specialist in refurbishment and revamps as well as with its technologies and process competence EDL has become an important part of the Pörner Group. We are glad about the good cooperation of the individual sites. The synergies resulting from it are beneficial for our customers and contribute substantially to the Group’s success.

Peter Schlossnikel and Andreas Pörner, Managing partners of the Pörner Group

From consulting, conceptual design, planning and procurement through to construction and commissioning we provide an allround no-worry package custom-tailored to the requirements and always being state-of-the-art.

Dr. Michael Haid and Wolfgang Kursch, Managing Directors of EDL Anlagenbau Gesellschaft mbH, Leipzig
We as EDL set standards in plant engineering when it comes to quality, technologies, service and safety. We fascinate our customers with innovative solutions and custom-tailored planning and design: from new plants, revamps of existing plants through to demanding engineering services. In doing so we capitalize on decades of experience and, to the extent possible we use standardized modular systems and solutions.

Our relations to customers, business partners and employees are based on reliability and responsibility, and constant improvement is what we want to achieve. Excellent technologies and outstanding services are means to create sustainable values for our customers thus securing their market leadership in the long run.

**Vacuum Distillation**

**Customer:** PCK Raffinerie GmbH  
**Site:** Schwedt/Germany  
**Project:**  
- Replacement of vacuum column  
- Improvement of energy efficiency of vacuum distillation unit  
- Conversion to modern deep-cut operation

---

**It is visions that take us forward**

Mission and Vision

We as EDL set standards in plant engineering when it comes to quality, technologies, service and safety. We fascinate our customers with innovative solutions and custom-tailored planning and design: from new plants, revamps of existing plants through to demanding engineering services. In doing so we capitalize on decades of experience and, to the extent possible we use standardized modular systems and solutions.

Our relations to customers, business partners and employees are based on reliability and responsibility, and constant improvement is what we want to achieve. Excellent technologies and outstanding services are means to create sustainable values for our customers thus securing their market leadership in the long run.

*It is our ambition to be a competent partner and consultant of leading refineries and chemical companies.*

Dr. Michael Haid, CEO
The beginnings of our company go back to Dr. Lazăr Edeleanu who founded in Berlin in 1910 a company to market his process of selective extraction of aromatic compounds by liquid sulfur dioxide. In 1930 the company was renamed Edeleanu GmbH. After several changes of ownership the Edeleanu GmbH Leipzig (EDL) was finally founded in 1991 as a subsidiary of Edeleanu GmbH with employees from the former Chemieanlagenbaukombinat Leipzig-Grimma (CLG).

In 2003 EDL became EDL Anlagenbau Gesellschaft mbH and part of the Pörner Group.

We have gained the trust of leading customers in the industry by first-class solutions and plants for the following sectors:

- Oil & gas
- Lubricants & waxes
- Petrochemistry
- Chemistry
- Renewable energies & specialties

For decades liquid-liquid extraction processes and advanced process technologies have been among our core competences.

We are committed to our long-standing plant engineering tradition in Leipzig. We want to achieve an even greater recognition of Leipzig’s plant engineering as a byword for quality, creativity and reliability beyond our national borders.

Andreas Liebscher, Head of Sales Division
In process engineering we lay the foundation for putting customer technologies, processes from renowned licensors and proprietary technologies successfully into practice.

Our process specialists develop complex solutions tailored exactly to the framework conditions, requirements and wishes of customers.

As a reliable and independent consultant we provide advice and assistance to our customers in the important project start-up phase concerning all questions of concept development, selection and procurement of own and third-party technologies. It requires knowledge and expertise gained in calculating, process simulations and process design over many years.

Our process competence builds on excellent skills and long years’ experience of our process engineers and forms the basis of successful project work.

Dr. Rolf Gambert, Head of Process Engineering Division

---

**CRUDE OIL DISTILLATION**

**Customer:** OMV Refining & Marketing GmbH  
**Site:** Schwechat/Austria  
**Project:** Modernization of crude oil distillation plant (TD4) in several phases to increase plant capacity
  - Stabilization of naphtha from main column and pre-flasher  
  - Stable parallel operation of two reboilers of the stabilization column by reboiler output control

---

**PROCESS COMPETENCE**

In process engineering we lay the foundation for putting customer technologies, processes from renowned licensors and proprietary technologies successfully into practice.

Our process specialists develop complex solutions tailored exactly to the framework conditions, requirements and wishes of customers.

As a reliable and independent consultant we provide advice and assistance to our customers in the important project start-up phase concerning all questions of concept development, selection and procurement of own and third-party technologies. It requires knowledge and expertise gained in calculating, process simulations and process design over many years.

---

**Oil & Gas**
- Crude & vacuum distillation
- FCC Visbreaker
- Coker
- Extraction
- Desulfurization
- Hydrotreating
- Alkyla/Isomerization
- Fischer-Tropsch synthesis
- Methanol
- Amine treating
- Acid gas removal
- Gas processing
- Utilities & offsites

**Lubricants & Waxes**
- Deasphalted
- Extrusion
- Dewaxing/Deoiling
- Hydrotreating/Hydrofinishing
- Grease & lube blending
- Wax packing
- Depolymerization
- Spray micronization
- Used oil re-refining

**Chemicals**
- Epoxy resins
- Bisphenols
- Glycidyl & other ethers
- Cyclohexanone
- Trichlorosilane
- Multi-purpose distillation

**Petrochemicals**
- Butadiene
- Propylene
- Phenol
- Aromatics
- BTX aromatics extraction

**Renewable Energy/Specialties**
- Power-to-X (e-fuels, e-waxes, e-chemicals)
- Photovoltaic
- CHP plants
- Plastics recycling
- Pilot plants
The constant improvement of our technological know-how and the development of proprietary technologies is an investment in the future not only for our own company but primarily for our customers as plant operators.

The focus of our process activities is on an improved and in particular sustainable processing of heavy refinery residues and used oils. Equally being in the centre of attention is the manufacture of climate-neutral fuels and chemical base materials on the basis of resources-saving processes meeting all current safety and environmental standards.

Highly specialized and committed engineers pool their wealth of technological know-how and many years of experience in plant engineering.

Added to the potential is a broad spectrum of advanced software ensuring an efficient outcome of high quality.

EDL offers efficient processes for the production of premium products.

With mature technology and equipment coupled with low investment and operating costs we provide for sustainability on our customers’ side.

Jan Schwartze, Head of Technology

---

EDL TECHNOLOGIES

The necessary process parameters and optimal process conditions are determined at own pilot plants on the basis of customers’, process and product requirements.

Our technologies in the areas of:
- Solvent deasphalting
- Solvent extraction
- Dewaxing
- Deoiling
- BTX aromatics extraction
- Spray micronization

facilitate the production of a variety of premium products, such as environmentally friendly tender oils (TDAE, TRAE) or deoiled waxes, and largely contribute to our customers’ competitiveness.
Each process plant is unique. Each has its own complexity and specific requirements. Technical and commercial processes have to be planned and coordinated in an exact manner. Our performance portfolio enables us to exactly meet the specific needs of our customers and their project requirements. With our engineering services in all disciplines of plant engineering and advanced tools we create the best solutions for our customers.

### Maximum flexibility for optimal solutions

Each process plant is unique. Each has its own complexity and specific requirements. Technical and commercial processes have to be planned and coordinated in an exact manner.

Our performance portfolio enables us to exactly meet the specific needs of our customers and their project requirements.

With our engineering services in all disciplines of plant engineering and advanced tools we create the best solutions for our customers.

### All services for new plants and plant modernization from one source with professional project management at all stages

**Studies & Project Development**
- Value engineering
- Conceptual design
- Process optimization
- Energy- & safety-related optimizations
- Risk assessments
- Cost-effectiveness analysis
- Plant evaluation
- O&M philosophies
- Project financing (ECA, structured, etc.)

**Basic Engineering & FEED**
- Basic engineering/FEED
- Process simulation (steady state/dynamic)
- PINCH analysis
- Fired heater analysis
- Flare network calculation
- HAZID/HAZOP
- Authority engineering
- Advanced process control (APC)
- Operator training simulator (OTS)
- Cost estimation

**Detail Engineering & Procurement**
- FEED check
- Detail engineering
- Constructability review
- Procurement
- Shipment & forwarding
- Expediting
- Inspection & QA/QC control
- Cost & schedule control

**Constructing & Commissioning**
- Construction supervision
- Subcontractor management
- Quality inspection
- Cost & schedule control
- Training
- Pre-commissioning & commissioning
- Start-up preparation & support
With over 50 completed large-size projects across Europe we are specialists for revamps in refineries.

The complex conversions of plants and plant units within short shutdown periods do not only require a wealth of experience at the site but also a very thorough preparation.

EDL – the revamp specialist

With profound expertise and long years’ experience in revamps during TAR/T&I we ensure the adherence to tightest deadlines. We serve our customers in all technical issues throughout the entire lifecycle of the project – competently and with a sense of proportion:

- Tailor-made process-related solutions to upgrade existing plants
- Active implementation of innovative technologies and new technical solutions
- Competent and efficient project and site management
- Preparation and implementation of the most advanced safety-related and environmentally compatible plant concepts
- Execution of revamp measures during extremely short shutdown periods
- Precise planning of dismantling and installation activities as well as preparation of detailed logistics concepts for the transport of special equipment

Benefits for our customers:
- Maximization of plant efficiency with minimum revamp costs and shortest shutdown periods
- Higher product yields
- Improved product qualities
- Greater operational safety
- Optimization of operating costs
- Minimization of energy consumption
- Increase of environmental compatibility

Josef Maily, PCK CEO

Thomas Schulze, Shutdown Manager „kleiner“ in special edition of Märkische Oderzeitung

… Thanks go out to all colleagues who paved the way for this success, also to the colleagues of the partner companies who day by day kept working hard, with diligence, determination, discipline and with a due portion of fun in any wind and weather for and with PCK in the four weeks of PCK-TÜV „kleiner“. It was a pleasure to work with service providers who are brilliant …

Klaus Schneider, Head of Project Management Division

The implementation of modernization projects gives customers a long-term added value because market requirements can be met in a target-oriented manner and competitiveness can be increased.
Beside competitiveness, flexibility and adherence to schedule the safety, health and environmental protection and the quality assurance is of special importance in plant engineering.

It is therefore our objective to always meet the requirements of our customers and our own strict requirements. The tool to achieve it is a complete system of quality assurance in all phases of project execution.

Safety comes first. Life and health of humans is what counts above all. Our employees are guided by this principle in everything they do and in all work processes.

It is our aim to engineer and build industrial plants reliably, safely and sustainably. To this end we implement our quality, safety, health and environmental policy.

René Pelz, Head of QA/HSE Management
CERTIFICATION IN RUSSIA

For several years EDL has been certified in Russia and thus is entitled to perform engineering services, construction and installation services for the Russian refining industry according to Russian standards.

THE NEEDS OF OUR CUSTOMERS ARE ALWAYS IN THE CENTRE OF OUR ATTENTION.

Permanent orientation to our customers’ requirements plays a major part in our daily activities. It also means transparency in project execution because mutual trust is the basis of a successful partnership. At the same time our customers are involved in all major decisions.

Our customer-oriented execution concept is characterized by:

- Project management across all levels – from the executive level via specialized departments through to the specialist engineer
- Project manager acts as one face to the customer, with full responsibility for cost, schedule and quality
- Efficient management of interfaces
- High degree of network integration using most advanced software

It is the close cooperation of all parties involved in the project that helps achieve the project goal with optimal results.

Lutz Nündel, Head of Plant Design Department
